

Client Monitoring System

Client Monitoring System (CVM)

All of Agroforestry Group's associated Managing Agents provide clients with access to a client portal called CVM (Client Viewing Module) via mobile application. The client portal allows all clients to monitor their trees progress 24 hours a day. It contains photos of all trees owned and their individual measurements such as height and girth. It also includes a video of each client's specific plantation with a detailed walkthrough by their plantation manager.

The client portal includes the following key client data:

Ownership Certificate

Clients can see a copy of the physical ownership certificate that they receive upon purchase. The ownership certificate includes details such as the total number of trees, product, date and land plot number in which their trees are on.

Client Tree Bar Codes

Clients can see their individual tree barcodes. Each barcode is unique to each individual tree and client. The barcodes assist the team in tracking tree specific data such as growth and planting dates.

Bar Code Measurements

Measurement details of each tree are constantly uploaded along with associated photos. Key measurement details include height and girth along with the time and date of measurement. Clients can easily track the progress of their trees growth in this section.

GPS

GPS coordinates of client trees and their plantation is indicated in the GPS section of the client portal.
